

# ImPACT baseline concussion testing

St. Vincent Sports Concussion Alliance

Free ImPACT Baseline Concussion Testing for sport-related head injuries, age 10 and older.

ImPACT (Immediate Post-concussion Assessment and Cognitive Testing) is a computer-based evaluation for sport concussions. It is recommended that baseline ImPACT testing begin at the age of 10. These scores can help determine when an athlete is ready to return to normal activities. By receiving a pre-concussion test, a baseline cognitive function can be established. This baseline can be compared to a post-concussion test later if the athlete suffers a head injury.

Thursday, July 11

3-6 p.m.

- Testing will be every 30 minutes starting at 3 p.m.
- Register now to guarantee a testing time at [healthcare.ascension.org/Events](https://healthcare.ascension.org/Events)
